

# Safe work site guidelines

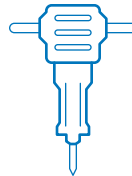

PGE is committed to the safety of our community, customers and co-workers. To safely connect your power, our inspectors and crews will require a safe, clean work site with clear access for PGE vehicles, personnel and equipment.

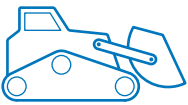

Following the safe work site guidelines below will help ensure your project stays on track and the safety of everyone involved.

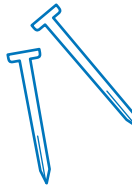

**Ensure work site is level** and the path to the power source and meter base(s) are **clear of obstructions**.

**Avoid scheduling other contract appointments for the same time period**, such as concrete work or other utility installations.

**Remove vehicles and construction equipment** from around the work site.

**Remove construction debris and materials**, including any scaffolding.

**Communicate any special instructions** to PGE Service Coordination (e.g. security gate codes).
