The Selective Water Withdrawal...

**Before Dam** (pre-1960s)

...creates reservoir currents that guide juvenile salmon and steelhead into collection facilities so they can be transported downstream around the dams.

**Before SWW** (1964-2010)

**Current Operations** (2010-Today)

...pulls water from the surface and bottom of Lake Billy Chinook so water released below the dams more closely matches conditions expected if the dams weren’t there.

**Power Generation**

...has no effect on the amount of electricity produced by the Pelton Round Butte Hydroelectric Project.
